

LIGHT COMMERCIAL
AIR CONDITIONERS CATALOGUE

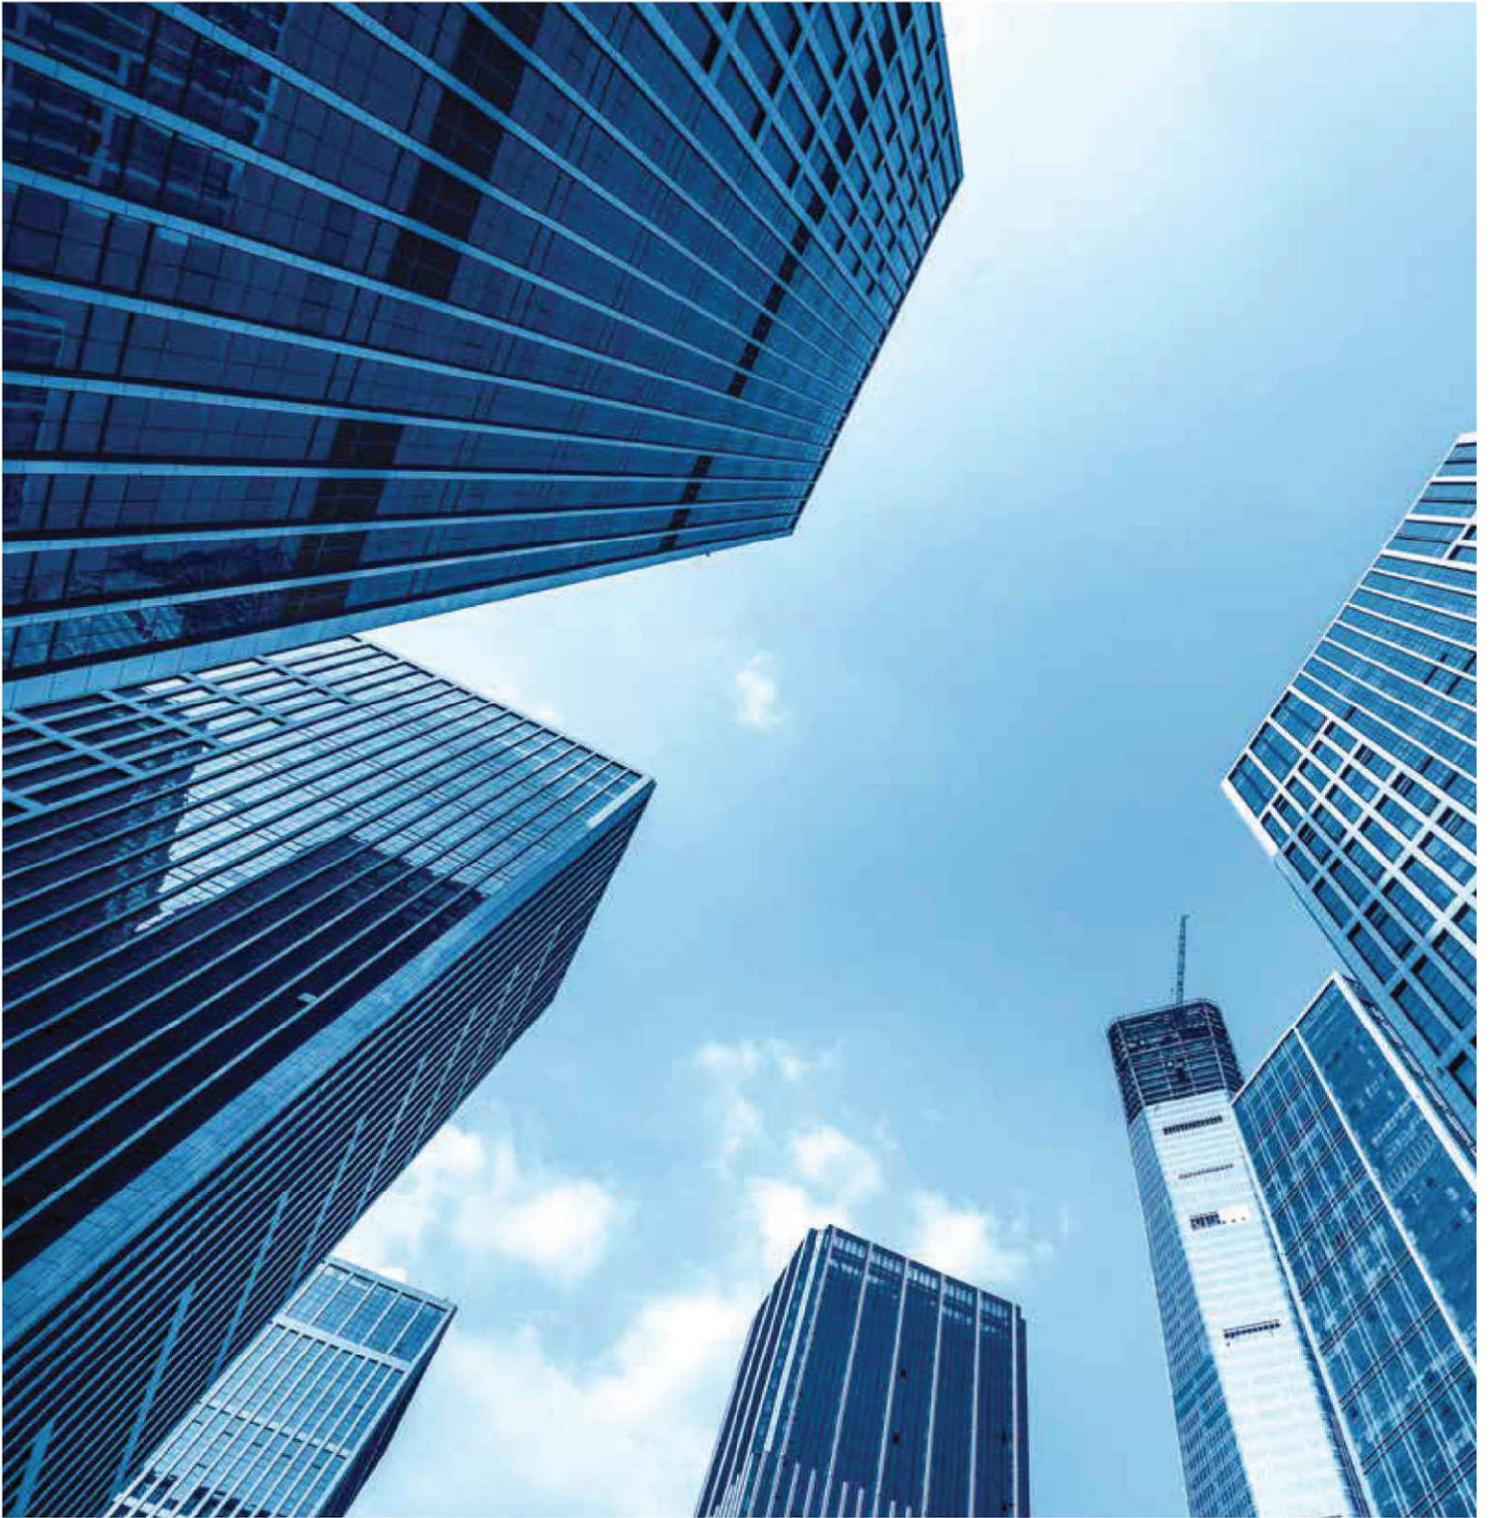

AUFIT
AIR CONDITIONER

The AUX Group has 11 production plants in China, Brazil, Indonesia, Thailand and Poland.

AUFIT
AIR CONDITIONER

Light Commercial Air Conditioners

Outdoor unit

Round Flow Cassette

Floor-Ceiling

Duct

Light Commercial Air Conditioners

Healthy and Clean Air

Fresh air Intake

Ready to connect with an air duct to introduce fresh air from the environment.

Long Duration Filter

The newest generation of long-life filter offers easier maintenance and better air quality.

Comfort

Anti-Cold Air

During the heating operation, the motor will delay its operation for a few minutes to avoid recirculating cold air in the room.

Follow Me

The built-in temperature sensor in the wireless controller informs the air conditioner about the temperature around it and ensures the ideal conditions in that spot, as if the air conditioner was following you.

Fast Cooling and Heating

The new technology compressors can reach high speeds in seconds. The fast moving refrigerant can achieve fast both cooling and heating conditions, creating immediately the proper temperature conditions in the space.

Auto Louver Swing

With the automatic movement of the blinds horizontally and vertically the air diffuses in the room faster.

Effective Drying

Achieve the ideal humidity levels in your space, reducing the appearance of allergies and viral diseases, while protecting your space's building materials.

4way Air Flow

Simultaneously activate the vertical and horizontal automatic louver movements for smoother air distribution in the room.

Light

Press the button to turn off/on the light indicator on the unit's panel.

Silent Mode

With the press of a button, you can enjoy your ideal temperature setting at the lowest possible noise levels.

Light Commercial Air Conditioners

Reliability

Self-Diagnosis

In the event that an error hinders the proper operation of the unit, the self-diagnosis function will perform a brief check and will present the relevant error code in the display.

Low Ambient Cooling

Thanks to the electronic control board, the speed of the external fan varies automatically according to the outside temperature, allowing trouble-free operation at temperatures as low as -15°C .

Smart Defrost

The intelligent defrost function of AUX commercial air conditioners is automatically activated according to the surrounding conditions, unlike the standard time-based defrosting of air conditioners.

No-Frosting Design

The unique piping layout keeps the outdoor unit shell at a higher temperature while preventing condensation water build-up, increasing heat transfer efficiency and preventing moisture water runoff problems.

Golden Fin

Prevents bacterial reproduction and increases energy transfer efficiency. At the same time, the anti-corrosive effect of the gold coating of the element offers increased protection against rain, sea air and other corrosive elements.

Fireproof-resistant Electrical Box

The new electrical box has a fire protection action of the highest safety standards, protecting the inside of the unit from fire caused by an electrical spark.

Low Consumption

Sine Wave Control 180°

The 180° sine wave DC Inverter 180° technology offers a much wider frequency and voltage range, higher energy efficiency, smoother operation and lower noise levels.

All DC Drive

Higher efficiency and lower noise levels with the full integration of DC technology in the compressor, fan motor and electronic expansion valve.

Sleep Mode

The temperature of the unit will steadily adapt during the sleep hours to provide the ideal conditions for a sound night's sleep. During cooling mode, the unit will increase its temperature by 1 during the first hours and return to the set temperature before waking up, while during heating mode, the temperature will instead decrease by 1 degree.

Hydrophilic Aluminium Fins

Hydrophilic aluminium fins have improved by more than 10%. The inlet and outlet of the refrigerant are now separated, ensuring proper subcooling and enhancing the cooling capacity of the air conditioner.

Easy to Use

Timer

The Timer allows you to set the use of the air conditioner per day by selecting the automatic start and stop time of its operation.

Integrated Drain Pump

The integrated pump can lift the condensation water 1200 mm higher than the drainage basin.

Drainage Selection

Easier installation with the option of connecting the drain pipe on either the left or right side of the indoor unit.

Digital Display

The digital display allows the control of parameters such as internal temperature, operating mode and set temperature, facilitating the process of controlling the unit.

Remote Controller

Offers easy and quick control of the air conditioner, allowing its adjustment to the desired operating conditions from a distance.

Wired Controller

It offers quick and easy control of the air conditioner and allows it to be mounted on a wall to avoid loss of air conditioning. It is mainly used in commercial premises for easier handling of air conditioners.

Central Controller

The central controller offers access to weekly unit programming as well as zone and unit group settings, up to and including 64 units, with RS 485 wiring (converter required).

WiFi Control 2.0

Create the ideal conditions in your space from a distance. Choose the desired mode at any time, from anywhere and if you are and activate your air conditioner easily via your mobile phone or tablet.

Washable Filter

The air filter of the indoor unit can be removed and washed to keep the air in the room clean during operation of the air conditioner.

Auto Restart

In case the air conditioner stops unexpectedly due to a power failure, it will restart to the last settings automatically when the power comes back on.

Outdoor unit

Outdoor unit

Universal outdoor unit, compatible with every type of indoor unit

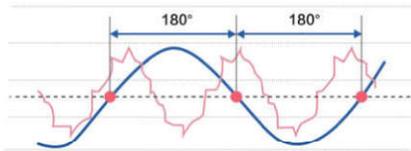

Low ambient operation

The outdoor units are designed to operate in Cooling or Heating mode even at temperatures of -15°C .

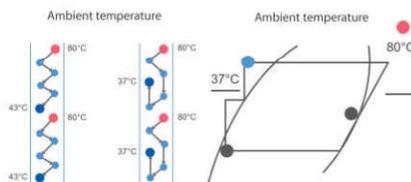

High efficiency

Equipped with a high efficiency DC compressor, variable speed fan motor and 180° sine wave inverter, the outdoor units achieve efficiency factors greater than 6.1 SEER and 4.0 SCOP.

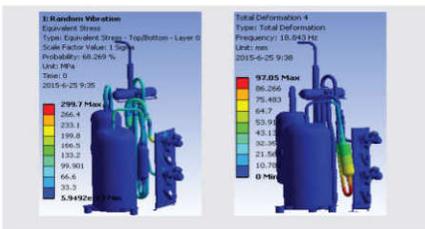

Sine wave control 180°

The 180° sine wave conversion technology allows the compressor to run smoothly, increasing significantly the efficiency of the unit.

Optimized refrigerant piping design

The design of the refrigerant piping ensures proper subcooling of the coolant and enhances the cooling capacity by separating the inlet and outlet of the refrigerant.

Simulation technology

The reliability of the system has been significantly improved by analyzing the stress distribution in the piping and its expansion and displacement during transport and operation of the unit.

Round Flow

Standard

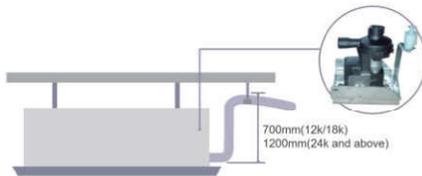

Optional

360° Air Flow

The cassette panel offers 360° output, for faster and more even coverage of the space.

Integrated drain pump

The Integrated drain pump facilitates installation in any space as it can lift condensates up to 700mm (for 12000 and 18000 btu/h units) and up to 1200mm for 24000 btu/h units and above.

Fast Cooling (30'') and heating (1')

The new technology compressors can reach 3900 r/min in 30 seconds. The fast moving refrigerant can achieve cooling conditions in 30 seconds and heating conditions in 1 minute, creating immediately the proper temperature conditions in the space.

Fresh air intake

Ready to connect with an air duct to introduce fresh air from the environment.

Low noise levels

Low noise levels during operation, for ideal room conditions.
